DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claims 1,2,7, 8 and 9 each recite a demodulating unit that demodulates multiple input signals and outputs a complex signal. However, the specification along with the drawings fails to describe such a demodulating unit. Figs. 1,5 and 8 shows a plurality of demodulating units, each outputting a complex signal.

The specification also fails to disclose comparing the sum of the distances to a given threshold. It discloses comparing the distance between two signal points to a threshold and comparing the average of the sum of the distances to a threshold. But there is no comparison of the sum itself to a threshold.

The dependent claims are rejected for the same reason as they include the subject matter of respective rejected base claims.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1,7,8.

The claim also recites a judging unit that calculates a sum of distances from a signal point to another signal point. “a signal point” and “another signal point” are not clearly understood because no relation is given between the “three or more input signals” and the signal points. In other words, from which one or ones of the three or more input signals “a signal point” and “another signal point” are derived is not clearly stated.

Claims 2 and 9

A reliability judging unit is defined to estimate a mapping point closest to a complex signal out of mapping points used when restoring bit data to an original state thereof from the complex signal, calculates a sum of distances from a mapping point to another mapping point for respective estimated mapping points. However, this limitation is not understood at all.

The dependent claims are rejected for the same reason as they include the subject matter of respective rejected base claims.
